For thousands of years, people have thought that the heart is just biological pump for blood circulation only. However on March 17, 2008, the chief investigator David Weasley from the University of South Florida Health Sciences Center announced to the world: the heart can secrete the life saving hormones, which not only kills 95 % of cancer cells within 24 hours, but for other terminally ill also have an excellent therapeutic effect! This is the God gave all desperate last one outlet, the last gift for human being. uncover God Weasley therefore known as "the ultimate bottom line," the scientist. Professor Weasley has been able to be successful over the years because he was actually his most intimate friends classmate guilty of holding a heavy heart

When Weasley in 1981 studied at the University of Washington Department of Biochemistry, Cohen James studied at the Department of Physics, and George Wade studied at Faculty of Law. They are the school basketball team's three core players. Through the long term game cooperation, Weasley and James, Wade established a profound friendship.

After graduation Weasley entering the University of South Florida Shuoboliandu Houweisili, James continued to pursue a master's degree at the University of Washington, Wade returned to his homeland of England as a lawyer. They have maintained a close Contact. In the next five years, the three have married. In

addition to Wade and his wife Anne are DINK families, Weasley and James are the child's father.

In early 2003, Weasley has heard the two sad news: Wade suffering from a severe coronary artery disease which was already at an advanced stage and James was diagnosed colorectal cancer that have not much therapeutic value. Even more unfortunate is that Wade's wife Anne was diagnosed shortly with breast cancer which was also late stage.

Weasley immediately went to Washington to visit , James at the old school, and later went to London to visit Wade couple. See former teammate and all-powerful prime coincided with the light of life on the basketball court, and now such as candle-like weak already, Weasley heartache, he was determined to do his utmost to save the old school of life.

Weasley this time is Principal Investigator University of South Florida Health Sciences Center, he discovered three hormones can promote vasodilation, if Wade's cardiovascular system to supplement the hormone on his crown heart disease will be able to have very good therapeutic effect. But Wade rejected Weasley's proposal. Wade said: "If you can not cure my wife, I am a person living in this world, what is the point?"

Doctors predict Wade and Anne are only three months of life, the two lists of 50 things to do before he died in sorrow, and ready to go one by one with three months to complete. In April 2003, when the countdown to their lives, they left last one wish: to travel the world. Because the money at this time has no meaning for them, they will be £ 40,000 generously to the travel agency, travel agency only to propose such a requirement: since they do not know which station is the last, so agency should not limit their travel time, until one of them died, then the travel contract termination. Travel agency through the investigation that they indeed have not much time, £ 40,000 is enough to pay

their luxury cruise around the world for one year, so pleased to sign such a special travel agreement.

The couple also invited James Wade to travel together, because they suffered the same fate, as well as memories of youthful memories for so many, he will make the trip to join significance. James regard bangs, but Wisconsin firmly opposed, he believes the three should not abandon the treatment, even if there is a glimmer of hope. Wade couple unchanged mind, they chose May 7 from the UK, take a luxury cruise ship to travel around the world, while James chose to go to Florida, to accept the Weasley's treatment.

At this point, James's life has also been predicted that the doctor entered the countdown, the continuation of life has been powerless hospital, bold dare Weasley had not yet entered human trials using a biological therapy for him: with interleukin -2 (IL-2) immune regulation of N treatment of colorectal cancer. IL-2 is a lymphokine produced by activated T lymphocytes, and to regulate the body's immune function, stimulate monocyte phagocytosis of tumor cells plays an important role. In the other Weasley and bioengineering laboratory joint efforts of colleagues, James's condition quickly brought under control, doctors predicted he lived a "doomsday" and continue to survive more than a year's time, until June 2004 James eventually pass away.

During this period, Weasley didn't heard from the couple Wade, sad to realize that they are already dead.

November 7, 2004, Weasley suddenly received an overseas telephone call from England, was actually Wade's voice! Wade excitedly told Weasley they just ended world tour. Wade returned to England with his wife after the Royal Hospital in London's most authoritative examination found that not only cancer cells in vivo Annie disappeared, and even he did not at

risk of coronary heart disease stabilization period! Weasley was very surprised, he decided to go to England, these pieces of incredible things get to the bottom.

At 23 o'clock on November 9, Weasley arrived in London. Wade and Anne wait at the airport and saw two radiant, hale and hearty look, Weasley hardly believe his eyes. This is already psychologically experienced the "dying" hugged an old friend for a long time, as the fate of the sad sorrows and joys hi sigh.

In the evening, Weasley asked the couple in detail about Wade's physical condition during travel. Wade bluntly, they were only eager for the beauty of the journey, did not utopian to their physical condition. Both glaciers in the Arctic, polar sun does not enjoy the experience of life in a beautiful and wonderful world, just want to let this moment a long time and then a long, unknowingly lived deadline doctors predicted. Later, while on vacation in Hawaii beach side, they all feel the discomfort of the body seems to have gone, but more and more abundant energy. Since then the two simply do not think of myself as a patient, and they only regard themselves as the world's most cost-effective luckiest visitors because the cost of one year after they have been produced in the travel far beyond the post before departure £ 40,000, and as long as they do not terminate travel, travel agents will have to continue to provide them services around the highest specifications.

Until November 7, has been around the globe, the couple returned to London, according to the contract if the two continue to travel down, travel agents may want to bankrupt. After Wade was offered a termination of contract, the travel agency relief. And then, from the May 2003 prior to their departure, the time has passed for a whole year and a half.

Wade returned to his hometown of London, the Royal couple can not wait to go to the hospital to do a comprehensive physical

examination, and then, they were told that a miracle occurred: the two actually get rid of the threat of both terminally ill! This evening they will be great news to tell all the family, including an old friend Weasley.

Hearing this, my heart has been very few Weasley, and occurs in the body of an old friend, it has not uncover the mystery of the human "self-healing" miracle from the "genesis" on! It is this trip brought unprecedented contracts "to enjoy a sense of value," the couple is eager to live a long life before long ideas in this wonderful experience of magnificent nature, so that their bodies produce cell structure a wonderful change, successfully repelled the medical means can not solve the disease!

Thought here, Weasley heart suddenly filled with a strong sense of guilt: the trip, the couple is very much like James Wade able to travel together, but James also let it end this way in a tour of life in full longing, is himself forced James Slavin into his lab! If we had James on that cruise ships are now standing in front of their own, probably three friends it!

Intense guilt and remorse make Weasley emotional extreme low. British newspapers reported on "a couple miracles, healing cancer around the world", so that the original guilty heart Weasley more guilt, it was not suffering from mild depression, laboratory work was suspended.

But after a period of "travel nursing" Weasley depression has eased. He then immediately into the subject of intense design process, this time, he was ready to be the person's mood is how to have an effect on disease research this subject as their goal, that is, he wants to uncover the mystery of human disease healing. He wants to figure out just how to heal incurable cases and exceptions, or universal principle as long as the conditions are met, we will be able to be established. Only to find out that

he can understand their friend is there for "criminal", is stripped of his first self-healing opportunity.

Weasley immediately issue was approved by the yard. He set up a special research group, specializes in the body's self-healing mechanisms. Prior to this, people only know after the terminally ill should actively take various rehabilitation measures to mobilize and enhance immunity, and establish the confidence to overcome the disease, remained optimistic, so you can make the body more healthy endocrine hormones, enzymes and acetylcholine, the immune system and organ function adjusted to the optimum state, so as to defeat the disease. But exactly what kind of material, the use of what principle, through what channels to kill cancer cells, the human is not clear. Which most people, including myself, James Weasley critical moment of life and death rather believe medical means, do not want to believe the reasons for the small probability of human self-healing mechanism.

Research on cardiac function has been the focus Weasley, and all the honors he had received are related to this study, this time he is the object of study is the heart of the lock. Because the heart in his mind is so mysterious, ancient people in the use of words such as "heart disease", "mood", "mood", "beloved" kind of vocabulary, he is convinced that the function of the heart pumping blood just never biological machines. Sure enough, after his own laboratory have discovered three hormones secreted by the heart. Prior to that, he thought two of which will have an impact on renal hormonal activity, another will only be able to promote vasodilation. But now, he thinks the impact of these types of hormones produced by the human body should be much more than that, maybe the mystery of healing cancer can find the answer.

God opened the "ultimate bottom line," his heart turned out to be the source of life

March 2005, Weasley and his colleagues extracted from human heart secretions all four hormones injected into laboratory cultures of human pancreatic cancer cells and found that the growth of cancer cells slowed significantly. They in turn respectively act on four pancreatic cancer cell hormone found better results alone, one of the named peptide hormones - also known as cardiac vasodilators secretions can kill 95% pancreatic cancer cells within 24 hours! The most valuable is that remaining 5% of the cancer cells, their DNA synthesis rate thus seems to have been affected, they will not be the diffusion of new cancer cells. This means that the heart secrete hormones can completely control the human cancer cells!

Thereafter up to 10 months time, Weasley experimental group almost all malignant cells, including prostate cancer, ovarian cancer and colon cancer are all carried out repeated experiments hormones destroy cancer cells, and finally they reached the following Conclusion: Cardiac hormones secreted by cancer cells directly kill cancer cells and inhibit DNA synthesis and growth of cancer cells to be effective, rather than accelerate cancer cells self deconstruction. And these four peptide hormones also help reduce blood pressure and increase the capacity of the human body excrete excess water and salt. This means that they are not only effective treatment for cancer, but also alleviate the symptoms of coronary heart disease. This is why Anne inexplicable disappearance of cancer cells in vivo, severe coronary heart disease can be the root cause of Wade effectively controlled.

The findings were so surprising and inspiring, the annual meeting of the American Endocrine Society, held June 20, 2006 in Philadelphia, the Weasley's new discovery has become the most compelling issue. But his mission is far from the end of the study, these four hormones such as for clinical, any side effects

on the human body, heart and under what circumstances, will secrete this magical substance, are needs further study.

Since then, the Weasley immediately begin laboratory animals QUICKER in vivo. In experiments in mice display, with hormone therapy, they healed in a short time with artificial pancreatic cancer and breast disease mice. Meanwhile, even in the case of tumors not completely disappeared, the tumor in mice will be greatly reduced, without any shift. Which affect the blood vessels to dilate the strongest kind of hormonal anticancer effects. What is more, the hormone secreted by the heart in mice not yet found have any side effects.

Weasley also selected 100 volunteers were at the heart of their hormonal secretion of various emotional state tracked collection, find people's emotions more expensive, the more pleasant mood, hormones secreted by the human heart the more abundant . On the contrary, people in distress, worry, depression and other negative state when the heart is almost completely stop the secretion of this hormone substances.

Thus, plagued mankind for thousands of years to heal incurable "cards" was completely opened, only when seriously ill keep people feel good, positive survival of patients with life-saving cardiac hormone secreted possible, when this hormone up to a certain amount of time, in order to kill cancer cells in vivo or inhibit their growth, so as to achieve the miracle of life died of self-healing! and those worried all day because of an incurable disease, live in desperate pain patients are never this self-more opportunities. From this, in fact, to all of God's life are desperate to stay the last exit, which is the last thing that God gave mankind the gift, but this one ultimate bottom line, do not come to the end of human life, and often do not see it!

After March 17, 2008, Weasley announced this to the world of God's ultimate cards, shocked the world, which is equal for

every desperate life have brought the Gospel rebirth! When most authoritative newspaper "The New York Times" reporter in an interview praised the discovery of unusual Weasley, no one thought could even mood is very low Weasley, said: "Western medicine Hippocrates originator As early as the fifth century BC, said that was not the doctor to cure the disease, but the body's own victory over the disease, but I realized that this sentence was too late, if I had five years to understand this truth, my classmate , excellent physicist James, would not lose his right to be present in this final gift in my ignorance discouraged."
